インド政府統計 の探し方

インド政府の統計情報源

総合統計

- 総合統計年鑑: Statistical year book India (統計・事業実施省)

全数調査

- 人口センサス: Census of India (内務省)、各種主題別センサス

主題別統計

- 主題別センサス、各種標本調査など(統計・事業実施省、政府各省庁関連部局等)

州別統計

- 州政府関連部局作成
- センサスや各主題別統計の州別集計表

いきなり検索エンジンで細かいデータを探しても上手く見つけれないことがある
(PDFファイルやデータベースの中身はヒットしにくい)

⇒データが収録されている出版物や作成元省庁など、上位の単位から探す

⇒インド政府のポータルから探す

- National Portal of India: india.gov.in
- data.gov.in: Open Government Data (OGD Platform India)

政府統計を探すおすすめフロー: Plan A

① Statistical Yearbookの目次で関連しそうな項目を探す

② 出典の省庁名・統計調査名等を確認し、ウェブ検索

③ 省庁内で迷子になったらメニューからStatistics, Publications, Data, Resourcesなどの項目を探す

④ 該当出版物・統計調査結果報告書から必要な項目を探す

いきなり data.gov.inでデータの中から探すという方法もあるが**最新情報**の有無や**データの定義**などは要確認

②でNational Portal of Indiaから省庁や州政府のサイトを一覧してもよい

うまくいかない場合：Plan B

① India Statistics “目的のキーワード”で検索

メジャーな項目はすぐヒットするが、**引用できるソース**かどうか？

政府では公表していない、あるいは管轄していないようなデータの場合、代替の情報源をあたる必要あり。その際も論文などの**出典・引用元**が参考になる。

②ドメイン名がインド政府 (gov.inやnic.inなどだが、独自ドメインのもの)のページがヒットすれば確認、なければ③へ

③ヒットした結果のページから出典を確認 (出版年が新しい論文や報告書があれば尚可)

④出典 (政府機関や出版物名)をキーワードとして再検索
⇒ Plan Aの③へ

社会統計などは項目名では容易に見つからない場合も

基本的データ①：総合統計年鑑

- **Statistical year book India (Central Statistics Office;CSO)**

- 統計・事業実施省 (Ministry of Statistics & Programme Implementation, MOSPI)のCSOが刊行
- 社会、経済、農林水産業、産業、エネルギー、通信、運輸、金融、貿易、労働などインドに関する様々な基本的データを掲載。
- 現在はウェブ版のみ。
 - <http://mospi.nic.in/publication/statistical-year-book-india>
 - ウェブには2011-2018まで掲載(2020年11月時点)
 - 2018年版は45の章(分野)にわたって統計を収録
- アジ研図書館では、多少の欠号があるものの総合統計年鑑を継続的に収集していたが、過去分はタイトルが変遷している

事前課題 解説・回答例

令和2年度アジア情報研修
「インドのことを調べよう！」
—法令・政府情報と統計を中心に—
科目②インドの統計を調べる

事前課題

- ・ インドにおける子どもの予防接種率について、できるだけ新しいデータを探してください。
 - A. 結核のワクチン(BCG)の接種率
 - B. 基本的なワクチンの予防接種率がもっとも低い州

設問のポイント

- トピックの選択
 - 予防接種、ワクチンについては現在COVID-19の流行で関心が高まっている。
 - また、インドは結核の感染者数世界一である。
 - 人口や経済などの統計は比較的見つけやすいが、保健などの社会統計は**キーワードによっては簡単な検索ではヒットしづらい**ため。
- データの細かさ
 - 主要な国家レベルの統計は日本語資料、国際機関統計でも得られることがあるが、**州別など国内の詳細なデータ**については国別の統計情報を探す必要があることを知る
- 言語
 - 日本語の資料からもヒントが得られる
 - 総合統計年鑑が見られない場合にも、**何らかのデータ**が得られる
 - A.に関しては、国際機関のウェブサイト(World Bank、WHO、UNICEF等) にも掲載あり。
 - B.に関してはNational Family Health Survey(NFHS)を参照すると掲載あり。

Code	SH.IMM.IBCG
License Type	CC BY-4.0
Indicator Name	Immunization, BCG (% of one-year-old children)
Long definition	Child immunization rate, BCG is the percentage of children ages 12-23 months who received vaccinations before 12 months or at any time before the survey for BCG. A child is considered adequately immunized after one dose.
Source	WHO and UNICEF (http://www.who.int/immunization/monitoring...)
Topic	Health: Disease prevention
Periodicity	Annual
Aggregation method	Weighted average
Statistical concept and methodology	Governments in developing countries usually finance immunization against measles and diphtheria, pertussis (whooping cough), and tetanus (DTP) as part of the basic public health package. The data shown here are based on an assessment of national immunization coverage rates by the WHO and UNICEF. The assessment considered both administrative data from service providers and household survey data on children's immunization histories. Based on the data available, consideration of potential biases, and contributions of local experts, the most likely true level of immunization coverage was determined for each year.
Limitations and exceptions	In many developing countries a lack of precise information on the size of the cohort of one-year-old children makes immunization coverage

INDIA

India - BCG

Description:

2019: Estimate based on coverage reported by national government. Programme notes that reported data are provisional. WHO and UNICEF are aware of the 2019-20 National Family Health Survey and await the final results. GoC=R+ D+

2018: Estimate based on interpolation between data reported by national government. Reported data excluded. Country reports that 2018 data are provisional. Increase in reported coverage is due in part to a 12 percent decline in reported target population compared to the prior year. Although India has undertaken many activities to address low vaccination coverage levels (e.g., Mission Indradhanush, strengthened microplanning and additional monitoring/accountability mechanisms), reported coverage levels are likely an overestimate given results from a 2018 coverage evaluation survey of 190 Intensified Mission Indradhanush districts. While the 2018 survey results suggest improvements in vaccination coverage compared to the 2015-16 National Family Health Survey, numerous districts had estimated coverage levels less than 90 percent for DTP3 and MCV1. GoC=Assigned by working group. No accepted empirical data.

2017: Estimate based on coverage reported by national government. The reporting cycle for the Government of India is from April 1 through March 31. Reported data for April-December 2015 are provisional. Results from the National Family Health Survey 2015-16 Fact Sheet suggests coverage of 93 percent. GoC=Assigned by working group. Consistency with information available in neighboring years.

2015: Estimate based on coverage reported by national government. Estimate challenged by: D-
 2014: Estimate based on interpolation between data reported by national government supported by survey. Survey evidence of 92 percent based on 1 survey(s). During May 2015, the Government of India conducted a review of state-level administrative and survey-based coverage data to derive a revised time series of official coverage estimates from 1998 through 2013. WHO and UNICEF are aware of recent state-level surveys conducted in

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we describe the grade of confidence (GoC) we have in these estimates. HOME

The National Family Health Survey (NFHS) is a large-scale, multi-round survey conducted in a representative sample of households throughout India. Three rounds of the survey have been conducted since the first survey in 1992-93. The survey provides state and national information for India on fertility, infant and child mortality, the practice of family planning, maternal and child health, reproductive health, nutrition, anaemia, utilization and quality of health and family planning services. Each successive round of the NFHS has had two specific goals: a) to provide essential data on health and family welfare needed by the Ministry of Health and Family Welfare and other agencies for policy and programme purposes, and b) to provide information on important emerging health and family welfare issues. The Ministry of Health and Family Welfare (MOHFW), Government of India, designated the [International Institute for Population Sciences\(IIPS\)](#) Mumbai, as the nodal agency, responsible for providing coordination and technical guidance for the survey. IIPS collaborated with a number of Field Organizations (FO) for survey implementation. Each FO was responsible for conducting survey activities in one or more states covered by the NFHS.

National Health Profile

An updated and credible National Health Data is essential for effective planning, decision-making, monitoring and evaluation of various Health Programmes & Health Sector Development activities. To achieve this objective, the Central Bureau of Health Intelligence (CBHI), annually brings out a Publication **“National Health Profile (NHP)”**, which covers all the major information on Demography, Socio-Economic Status, Disease Morbidity & Mortality, Healthcare Finance, Human Resources in Health and Healthcare Infrastructure. NHP is an initiative which is at par with international standards of data publications. The objective of this publication is to create a versatile data base of health information of India and making it available to all stakeholders in the healthcare sector. This data base of health information is comprehensive, up-to-date and easy to access. This publication takes into account recent trends in demography, disease profile (communicable and non communicable/lifestyle diseases) and available health resources which define a country's health status. The disease profile has been presented following standard coding from Family of International classification(FIC).This improves interoperability of the data internationally. The purpose is to provide relevant information for planning and decision making on an informed basis to the planners, policy makers, health administrators, research workers and others engaged in raising the health and socio-economic status of the community. This publication is useful for medical post graduates and trainees of medical and paramedical personnel.
